

For Your Peace of Mind

12/05/2012

To whom it may concern

This letter is to confirm that The Ariel Properties Group has been working with Better Air for the past 2 years.

A pilot was carried out at the beginning of the work term due to repeated residents' complaints of Bad Odors from the AC system at our Rubinstein Building.

LAB tests proved that the AC system and Ducts were indeed infected with High quantities of Odor causing Molds and Bacteria; Better Air installed and operated a BioZone system at the main lobby of the building where the LAB tests were carried out.

In less than a week, the odors were completely eliminated and additional LAB results revealed a significant infection reduction.

I would like to emphasize the fact that I personally, am very satisfied with this unique technology and believe in this natural process of Infection reduction inside buildings and closed spaces.

I highly recommend adopting this method in order to create a balanced and healthy indoor environment and as a solution for many symptoms of "Sick Building Syndrome".

Sincerely

David Prigal, Eng.

Chief Engineer

Ariel Properties Group
