RE: Better Air

This letter hereby confirms that the BioZone Technology implemented at our buildings by Better Air has been, and still is operational for over a year and a half now.

The BioZone technology is installed in our mechanical airflow systems at each of our 3 buildings.

Periodical Microbiology LAB tests performed both in the Air flow system and on surfaces inside the ducts prove undeniably, that the BioZone system prevents Pathogenic infection in the airflow systems of all three buildings.

I am both glad and proud to be amongst the early adaptors leading the area of "Healthy Buildings" securing the health and quality of life of Azrieli Towers' guests and occupants.

Sincerely

Itai Reshef

General Manager
